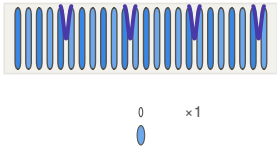
P-loop, 24TM/4P

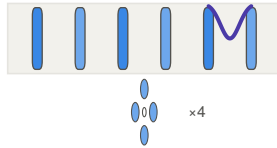
24 TM per subunit · 4 pore loops



Cav, CatSper — and Nav

P-loop, 6TM/1P

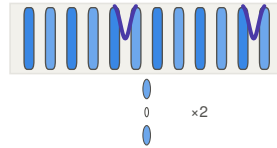
6 TM per subunit · 1 pore loop



TRP, CNG, ITPR, RYR

P-loop, 12TM/2P

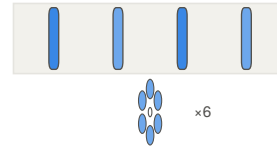
12 TM per subunit · 2 pore loops



TPC

ORAI

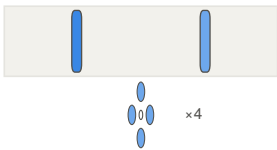
4 TM per subunit



one central pore, six subunits

MCU

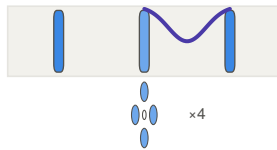
2 TM per subunit



the DIME ring

iGluR

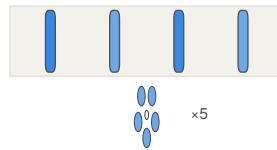
3 TM per subunit · 1 pore loop



AMPA, NMDA — inverted pore

Cys-loop

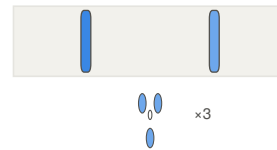
4 TM per subunit



nAChR alpha7

P2X

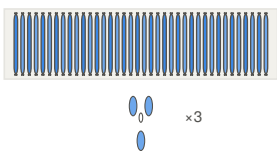
2 TM per subunit



P2X1–7

Piezo

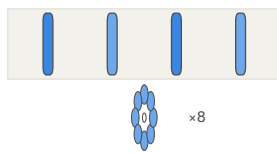
38 TM per subunit



the three-bladed propeller

CALHM

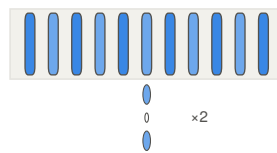
4 TM per subunit



large pore

OSCA / TMEM63

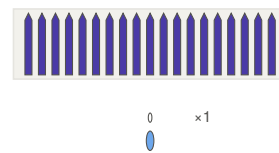
11 TM per subunit



the anoctamin fold

β-barrel

19 TM per subunit



VDAC

Schematic — one subunit at its recorded transmembrane count, with the subunit stoichiometry below. Not structures: nothing about helix packing or pore shape is implied.
